

Innovative staking platform

t.me/IOXplatform

What is IOX

IOX is a protocol that has already made money for many users inspired by the highly successful Avarice platform. This model has proven its charm and has been running for a long time. We have made some optimizations to this model to encourage long-term investors and make contracts more durable. And we bring the auction fun and FOMO to the Avalanche Chain

IOX is designed to provide maximum benefit to the stakers. Users will buy SEED tokens with IOX on our easy to use DApp They can then stake their IOX token to earn interest paid in IOX along with their share of the IOX dividends from the day auction lobby. Users can make stakes as many as they want and hold them for as long as they want up to a maximum of 300 days. The longer the stake, the more interest you earn, all while enjoying staking bonuses along the way. Simple.

How are we different from avarice?

1. We are the first project of this model on avalanche chain while avarice token is on BSC
2. We have optimized the user experience and design to improve user friendliness
3. We have optimized the algorithm for staking bonuses, which is more beneficial to long-term staking.
- 4 Avarice's AVC token release decreases by 0.5% every day, which will lead to a relatively high AVC price for users who enter later Our IOX token release increases by 2% every day. which ensures that users who enter later will also have a good ROI and at the same time does not affect the payback period of users who enter early
5. We will add liquidity to IOX token which is our longterm system token, and airdrop IOX to brave investors who invest when the daily funds entering the lobby are gradually reduced

How do you get IOX token?

There are 3 main ways that you can get IOX tokens

1. Participate in a daily auction
2. Refer your friends and earn 5% bonus on all of their auction entries.
3. StakeIOX token to earn daily interest on your stake. (See "tokenomics for a full breakdown)

Bonus Tokens

Users receive bonus IOX tokens on their active stakes which is highly based on the duration of

their stakes. Longer the duration higher the bonus percentage. The graph shows the growth of the bonus tokens % for Stakes. At its highest (which is 300 days)

the percentage goes up to 45500%

Staking System

The staking portal lives on our panel where users can stake their IOX tokens for their desired duration up to 300 days. Stakes will accrue daily IOX dividends based on the amount of IOX tokens staked. This amount will vary on the amount of IOX in the lobby on each day of the stake, stakes will also receive IOX bonus tokens.

What is the Dividends pool?

93% of all IOX that enters the daily auction lobby is pooled to be distributed back out to the stakeholders, which we call the dividends pool. At the end of each day the IOX dividend pool will be calculated and allocated to all of the open stakes based on their staked amount. How is the Dividends pool calculated?

As shown on the next slide daily dividend payout is split over a period of time. For example. assuming day 3 ended with a 100 Lobby IOX entry, that IOX will be divided by 3 as it's day 3. and split out over 3 days in chunks of 33.3 AVAX. Another example; day 10 ends with 100 IOX. these IOX are split into chunks of 10 which are sent out over 10 days. As the days go on and the pools grow in size, these dividends will keep going and adding allowing for much stronger and stable payouts! This caps will be at day 60. This also ensures that our project can live a longer lifespan and adds to the game theory behind the staking of the tokens themselves

Auctions!

Auction lobbies are the main way users can acquire IOX token. Each day SEED tokens will be auctioned and users can stake AVAX and collect SEED tokens at the end of the day proportional to their contribution

Where does all the IOX go?

93% of the IOX collected is returned to the stakeholders. 65% is reserved for development costs and marketing. 1% is used for adding liquidity to IOX token.

How many tokens?

On day 1 Lobby there will be 3,000,000 tokens up for grabs. At the end of each day, the number of tokens in the auction pool will increase by 25%

The "price" of the token will depend on how much IOX has been contributed to the lobby on that day, if you watch closely you will be able to spot light days and take advantage by increasing your share of that day's pool

Market

There is no direct feature in contract to sell IOX Tokens, however there is a feature for users to sell their active stakes! In the panel on the "Market" section users can put up their stakes for sell or chose to buy other users auctioned stakes!

Buying an active stake will move the stake to the buyers account and it will be visible in their panel and collectable (both the stakes IOX tokens and it's IOX dividends) after the stake ended There is a 10% fee that the stakes seller pays, which 8% of that will be buybacked to the contract's current day lobby.

Referral System

IOX project has a great referral system that rewards both side! Everyone wins when using a ref link! There's zero reason NOT to use one! Your referrals will earn an extra 1% minted IOX tokens on their auction lobby collect. As the referrer you will earn an extra 5%. There are no limits on number nor the amount of referrals that you can get.

Can I change my referral link?

Yes, your referral address saves on your browser & cookies, you can always remove or change

your referral by clicking on a new referral link or removing cookies

What is my referral link?

You can find your referral link on the IOX project panel

Contract Code Audit

Audit Summary

Interfi team has performed a line-by-line manual analysis and automated review of smart contracts. Smart contract where analysed for basic contract vulnerabilities, exploit and manipulation hack; According audit;

- IOX project's solidity source code has **LOW RISK SEVERITY**
- IOX project's smart contract has on **ACTIVE OWNERSHIP**
- IOX project's centralization fk comicted to the active owner is **MEDIUM**
- important owner privileges - **SWITCH LOANING STATUS, FLUSH LOBBY ENTRY, FLUSH DEV**

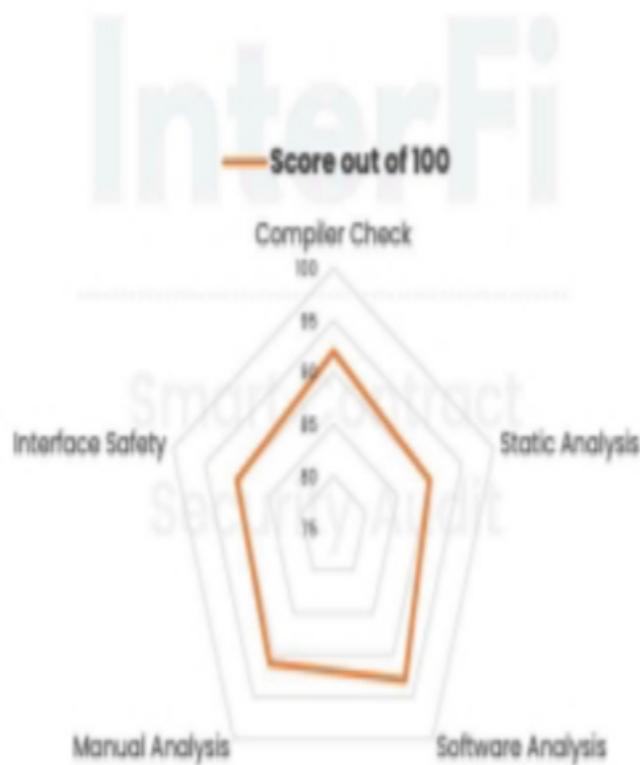

SHARES OF STAKE SELLS • Important external functions - **WITHDRAW LOANED FUNDS, SELL STAKE REQUEST, CANCEL**

STAKE LOAN REQUEST, EXIT LOBBY, END STAKE

Risk Status & Radar Chart

Risk Severity	Status
High	No high severity issues identified
Medium	No medium severity issues identified
Low	2 low severity issues identified
Informational	1 informational severity issue identified
Centralization Risk	Active contract ownership identified

Thank you
